Abandoned Oil Fields in Kansas and Nebraska

December 1982

Jim Chism, *Technical Project Officer*
Bartlesville Energy Technology Center
P.O. Box 1398
Bartlesville, Oklahoma 74005

UNITED STATES DEPARTMENT OF ENERGY

FOREWORD

Previous DOE reports, DOE RA 33210-01, "Abandoned Texas Oil Fields" and DOE FE 33210-02 "Smaller Abandoned Texas Oil Fields," were published in December 1980, and July 1981, respectively. These publications list 2,476 abandoned fields that had produced 50,000 or more barrels of oil before abandonment. DOE/BETC/IC-82/2 "Abandoned Oil Fields in Arkansas, Louisiana, Mississippi and New Mexico" was published in July 1982 and listed 182 abandoned fields that had produced 10,000 or more barrels of oil before abandonment. Favorable public response to these reports has prompted this new publication listing approximately 400 abandoned oil fields in Kansas and 90 abandoned oil fields in Nebraska.

If you have any comments about the usefulness of data in these reports, please send them to:

Jim Chism
Bartlesville Energy Technology Center
P.O. Box 1398
Bartlesville, Oklahoma 74005

Your comments will be helpful in assessing the feasibility of expanding this study to other oil-producing states.

Introduction

DOE Fossil Energy is charged with sponsoring the development of additional domestic oil and gas supplies. As part of this effort, the potential of recovering additional oil and gas from abandoned fields is being investigated.

A preliminary study was conducted of abandoned Texas oil fields for the following purposes:

- To assess the potential resource from abandoned fields;
- To assess the barriers to reactivation of the abandoned fields; and
- To provide an easily accessible and useful data source to be used as a preliminary screen for identifying fields for further technical and investment evaluations.

This study indicates that a considerable amount of petroleum may be economically recoverable at today's oil prices from reservoirs abandoned when prevailing prices were lower. In addition, reservoirs that were never tested or that were tested and determined to be uneconomical to produce may now prove to be economical to produce.

A major barrier to the timely production from the abandoned fields has been the lack of pertinent, readily available, systemized information. Oil producers, having learned of previous exploration and production efforts in an area, have for some time gone to state agencies to search the records for a good prospect. Drawing on several sources, the DOE has developed a listing of believed unduplicated data in one source.

Data Sources

Data were obtained from the Petroleum Data System at the University of Oklahoma and validated by visits to the following state agencies:

Kansas Geological Survey

Nebraska Conservation Division

For this report, abandoned oil fields are defined as those fields listed by state agencies as officially abandoned and that produced at least 10,000 barrels of oil.

Report Format

Figure 1 presents a sample page of the data produced with numbered data elements keyed to those listed below:

(1) County
(2) DOE field code
(3) Field name
(4) AAPG geologic province code
(5) Discovery date of field (reservoir)
(6) Year of last production, if known
(7) Discovery well operator
(8) Proven acreage
(9) Formation thickness
(10) Depth of field (in feet)
(11) Gravity of oil production (in degrees API)
(12) Calendar year
(13) Yearly field oil production
(14) Yearly field gas production
(15) Cumulative oil production
(16) Cumulative gas production
(17) Number abandoned fields in county
(18) Cumulative production of oil from fields
(19) Cumulative production of gas from fields
